# VASE CARE

Vases are designed and 3D printed in Baranduda, VIC, Australia. Made from PLA (Polylactic Acid): an eco-friendly, bioplastic derived from plant starch.

- Vases are made up of hundreds/thousands of printed layers. Treat them like handmade objects: do not squeeze or drop on hard surfaces.
- 1/2 to 3/4 fill with cool water & support from the base when lifting (don't squeeze).
- To clean, rinse with cool water & dry upside down.
- PLA is not UV resistant.
